~~~~~

Notes:

Kay Lawrence:

- R9 continues to meet with the Navajo chapters over the weekend. People are still expressing concerns related to potential health impacts. The Superfund Claims form also has led some people to question EPA's motives
- R9 appreciates the willingness of BIA/DOI to work with EPA and providing the locations for 13 livestock tank locations on Navajo land.

Steve Mason:

- In R6 things are winding down, no sampling scheduled for today. They do plan to hold a community meeting in Farmington and are preparing a letter to go out to folks who rely on private wells.
- 

Gina Cristiano:

- R8 continues to sample private wells at the request of the landowners, but they are no longer doing sediment sample. They have received some public questions on if they are meeting the requirements of the endangered species act, i.e., entering into consultation.
- The Bureau of Rec has been approached by EPA to provide a Construction Safety Specialist to help at the Gold King mine site.

R9 is coordinating closely with the State of Utah to sample in the San Juan River. In addition EPA has been approached by the State to sample some of the Rivers tributaries to help come up with some background data. R9 wants to work closely with R8, as Utah is in R8's AOR.
